INTRODUCING THE BLACK SEED

Black Seed truly is an Amazing Herb!

For centuries, the Black Seed herb and oil has been used by millions of people in Asia, Middle East, and Africa to support their health. An aromatic spice, similar looking to sesame seed except black in color, it has been traditionally used for a variety of conditions and treatments related to respiratory health, stomach and intestinal health, kidney and liver function, circulatory and immune system support, and for general overall well-being. Black Seed is also known as Black Cumin, Black Caraway Seed, Habbatul Baraka (the Blessed Seed), and by its botanical name "Nigella Sativa".

Since 1959, over 200 studies at international universities and articles published in various journals have shown remarkable results supporting its traditional uses recorded almost 1400 years ago.

While the Black Seed is highly effective by itself, ongoing studies with the combination of other herbs have produced remarkable results.

Amazingly Black Seed’s chemical composition is very rich and diverse. Aside from its primary ingredient, crystalline nigellone, Black Seed contains 15 amino acids, proteins, carbohydrates, both fixed oils (84% fatty acids, including linolenic, and oleic), and volatile oils, alkaloids, saponin, and crude fiber, as well as minerals such as calcium, iron, sodium and potassium. There are
still many components in **Black Seed** that haven't been identified. But research is going on around the world.

Muslims have been using and promoting the use of the "Black seed" or "Al-Habbatus-Sawdaa" for hundreds of years. It has become very popular in recent years and is sold by many Muslim and non-Muslim businesses. A large part of this herbal preparation’s popularity is based on the teachings of the Prophet Muhammad (peace and blessings be upon him).

The Prophet Muhammad (peace and blessings be upon him) said, "**There is healing in the black seed for all diseases except death**". However, many products that are presently sold as "black seed" may be black cumin, black caraway, or even coriander. As-Suyuti’s Medicine of The Prophet Muhammad (peace and blessings be upon him) has black seed listed as coriander seeds, with arguments presented for black cumin, terebinth, and even mustard. However, research seems to favor "black cumin" or Nigella sativa as the black seed. Black cumin may be referred to as nutmeg flower or roman coriander, and even fennel flower by gardeners.

Black cumin has been used for a variety of medical problems for several thousand years. They range from stomach aches to asthma, cancer to coughs, and the traditional use as a spice.
Black cumin is also used as:

- **a carminative** (rids the body of gas from the intestines), a digestive (aids in digestion),

4
Black Seed – The Universal Remedy

- a **diuretic** (increases urine flow by ridding the body of excess water),
- an **emmenagogue** (promotes/regulates menstruation),
- a **galactagogue** (increases production of milk),
- a **resolvent** (dissolves boils & swelling),
- a **stimulant** (increases the flow of adrenaline and energy),
- a **stomachic** (relieves stomach disorders),
- a **sudorific** (increases perspiration),
- a **tonic** (improves bodily functions),
- and a **vermifuge** (expels worms).

To ensure that you are taking the black seed look for the words **Nigella sativa**. Only this plant, as opposed to true cumin or coriander has the ability to "heal all diseases".

Research suggests that the black seed is an effective anti-tumor treatment for certain types of cancer, including breast cancer and fibrocystic breast disease. The black seed may also be of possible benefit in treating high blood pressure. Except its potential to cause spontaneous abortions (and only in high doses), there may be little, if any, toxic side effects to using it. There is even some research on the possible contraceptive abilities of the black seed. More research is being done on its effectiveness and research trials are also being planned in various countries to study its actual effects on humans. However, the Prophet Muhammad(peace and blessings be upon him) words tell us there is healing in this plant.
Black Seed – The Universal Remedy

However, there is more to be learned regarding the appropriate doses for various medical problems.

**Arabic Name**: *Habb al-Sauda* (Hadith) Shoniz, *Habb al-Barakah*

**Other Names**:
- *Black Cumin, Black seed* (English),
- *Nielle* (French, German)
- *Melanthion* (Greek)
- *Shoniz, Siah Dana* (Persian)
- *Ketzach, Ketyach* (Hebrew)
- *Kalaunji* (Hindi, Urdu)
- *Krishn Jirak* (Sans.)
- *Kaliyira* (Beng.)
- *Kalaonji Jiram* (Gujarati)
- *Nilajirakira* (Tel.)
- *Kalijira* (Mar.)
- *Karaunji Rigam* (Tamil)
- *Karun Chiragam* (Mal.).

**Botanical Identification**: *Nigella sativa* Linn-Herb. (Family :Ranunculaceae). The name *Nigella* comes from the Latin word *nigellus*, meaning black.

**Distribution**: Mediterranean Region. Cultivated in many countries including India.
Appearance & Texture: *Nigella sativa*(Black Seed) are small matte black grains with a rough surface and an oily white interior, similar to onion seeds. The seeds have little bouquet, though when rubbed, their aroma resembles oregano. They have a slightly bitter, peppery flavor and a crunchy texture. The seeds may be used whole or ground and are usually fried or roasted before use (they are easily crushed in a mortar).

HADEETH & ISLAMIC PERSPECTIVE ON BLACK SEED:

1. The Prophet(sallallahu alaiyhi wassalam) said, "Black Cuminin (Habbas-Sauda) is the cure for all the diseases except Saam and "Saam is death". (Narrated Abu Huraira; Bukhari, Muslim, Ibn Maja, Masnad Ahmad).

2. "I came to Madina with Ghalib bin Al-Jabr. During the journey, Ghalib fell ill. Ibn Atique came to see him and said that Ayesha(radhiyallahu anha) narrated that the Prophet Muhammad (sallallahu alaiyhi wassalam) said, "Black cumin is remedy for all diseases." We powdered Black cumin, mixed with olive oil and dropped it in both the nostrils (of Ghalib). We did it and Ghalib recovered. (Narrated Khalid Bin Saad, Ibn Maja, Bukhari).

3. The Messenger(sallallahu alaiyhi wassalam) of Allah said,"Black cumin is the cure for all ailments except death." (Narrated Burda; Masnad Ahmed)

4. The Messenger(sallallahu alaiyhi wassalam) of Allah said, "Make Black cumin obligatory (its use as
Black Seed – The Universal Remedy

medicine) for yourself as it is a cure for every disease except saam " . Someone asked, 'What is saam" . He said, "Death". ( Narrated Ayesha- Masnad Ahmed, Abdullah bin Umar - Ibn Maja; Abu Huraira - Tirmidhi).

Muslims have been using and promoting the use of the "Black Seed" or "Al-habbit ul Sawda" for hundreds of years, and hundreds of articles have been written about it. Black seed has also been in use worldwide for over 3000 years. However, many Muslims do not realize that black seed is not only a prophetic herb, but it also holds a unique place in the medicine of the Prophet(sallallahu alaiyhi wassallam). Black seed is mentioned along with many other natural cures in the Hadith. However, many herbs and natural cures in the Hadith and Qur'an are simply "mentioned" briefly, leaving the discerning searcher to utilize it. Black seed is one of the few that is said to "cure all diseases except death." It is unique in that it was not used profusely before the Prophet Muhammad(sallallahu alaiyhi wassallam) made it’s use popular, and it is one of the few herbs that is described in great detail in the Hadith with recipes and instructions on usage actually being found in the Hadith themselves. Last, but not least, black seed has been studied by Muslims and non-Muslims alike.

Although there were more than 400 herbs in use before the Prophet Muhammad(sallallahu alaiyhi wassallam) and recorded in the herbals of Galen and Hippocrates, black seed was not one of the most popular remedies of the time. Because of the way Islam has spread, the usage and popularity of black seed is widely known as a "Remedy of the Prophet(sallallahu alaiyhi wassallam)".
In fact, a large part of this herbal preparation's popularity is based on the teachings of the Prophet(sallallahu alaiyhi wassallam). The Prophet(sallallahu alaiyhi wassallam) not only mentioned the usefulness of black seed in his teachings, but also gave specific instructions on how to prepare the seed for medical use.

In fact, since it was made popular in the Seventh Century, there has not been a period in Muslim history when the use of it was ever stopped. At all times the seed was utilized with the belief and faith that benefits will be derived from practicing the Holy Prophet(sallallahu alaiyhi wassallam)'s Sunnah.

In addition to the above mentioned Ahaadeeth, there are several others in which Black Seed / Black Cumin has been described as a medicine of great value. Some of the books on the “life of the Prophet Muhammad” (Sirat -al-Nabi) have reported that he(sallallahu alaiyhi wassallam) used to take Black Cumin with honey regularly. It must be borne in mind that the Prophet(sallallahu alaiyhi wassallam) also gave great emphasis on the use of medicines in general and Habbul-Sauda in particular for various ailments and that is why he used to say that it is a "medicine for all ailments except Saam i.e. death". As a matter of fact he(sallallahu alaiyhi wassallam) gave this advice for several other medicines also which indicates that he laid emphasis on the use of medicine.
CONFUSING THE BLACK SEED WITH OTHER SEEDS

Scholars of Hadeeth have generally reported that Habbe-Sauda is the Arabic name of Shoniz(Persian) and these black seeds are also called Kammun Aswad (Black Cumin). In Persian, names like Siah Biranj or Siah Dana are also given which mean Black seed. It must be made clear that cumin (Arabic- Kamun) are the seeds from Cuminum cyminum (known as Zira in Hindi, Urdu and Persian). Likewise carway seeds from Carum carvi are also called Siah Zira although these are quite different than the seeds of Nigella sativa. The seeds of Ipomoea hederacea are also called Kala -Dana -i.e. Black Seeds, in Indian bazar. Even the black seeds of Mustard (Brassica nigra) are also sometime termed Kala Dana (Arabic- Kharadal Aswad). Thus, it may be said that there is lot of confusion in the identities of names like Kala Dana, Siyah Dana, Kala Zira, Siyah Zira etc. but the black seeds referred to in the Hadeeth under the name Habbe-Sauda are definitely the seeds from Nigella sativa and may be called Black cumin.

WHAT IS BLACK SEED ?

An annual herbaceous plant, black seed (Nigella sativa) is believed to be indigenous to the Mediterranean region but has been cultivated into other parts of the world including Saudi Arabia, northern Africa and parts of Asia.
Black Seed – The Universal Remedy

Tiny and hairy, being no more than 3mm in length, black seed originates from the common fennel flower plant (Nigella sativa) of the buttercup (Ranunculaceae) family.

The plant has finely divided foliage and pale bluish purple or white flowers. The flowers grow terminally on its branches while the leaves grow opposite each other in pairs, on either side of the stem. Its lower leaves are small and petiole, and the upper leaves are long (6-10cm). The stalk of the plant reaches a height of twelve to eighteen inches as its fruit, the black seed, matures.

Nigella sativa reproduces with itself and forms a fruit capsule which consists of many white trigonal seeds. Once the fruit capsule has matured, it opens up and the seeds contained within are exposed to the air, becoming black in color (black seeds).

Nigella sativa and its black seed are known by other names, varying between places. Some call it black caraway, others call it black cumin (Kalonji), or even coriander seeds. In English, the Nigella sativa plant is commonly referred to as "Love in a Mist". Nevertheless, this is Nigella sativa, which has been known and used from ancient times and is also known in Persian as Shonaiz.

The most pertinent point to be made about black seed is that it should be regarded as part of an overall holistic approach to health and ideally should be incorporated into one's everyday lifestyle. In this way, the many nutritional and healing properties contained in the seed can help build the body's immune system over time,
supplying it with the optimum resources it needs to help prevent and fight illness.

**HOW TO CULTIVATE?**

**Potting:** These plants flourish in regular, well cultivated garden soil. They need to be set 4 to 5 inches apart to produce healthy, long-lasting flowers. Nigellas don't need any support. To harvest Black Cumin, pick each pod as it turns yellow. Dry in batches in the sun. Use a catch cloth or bag to catch the seeds as the pods split, then strain the seeds to remove chaff. Black cumin has a strong flavor, resembling fennel. Grind the seeds and use as you would pepper in seasoning, but test first.

**Propagation:** Seeds may be sown outside in the spring. Don't sow them too thickly, however, because they will not flourish if overcrowded. They will need to be thinned 4 to 5 inches apart. These plants can easily be cultivated in a greenhouse that has a night temperature of 45 to 50 degrees. They may be sown from September to January to provide flowers from March to June. They may be grown in 5-inch pots or in deep flats or benches. These should be filled with a light, fertile, well drained soil. When transplanting seedlings, make sure not to disturb their roots for they won’t recover very easily. Take care in watering; too much will cause failure and too little will cause their leaves to yellow. Plants that have filled their pots up with roots should be given a dilute liquid fertilizer weekly.
HISTORY OF BLACK SEEDS:

Nigella sativa (Black Seed) was discovered in Tutankhamen's tomb, implying that it played an important role in ancient Egyptian practices. Although its exact role in Egyptian culture is not known, we do know that items entombed with a king were carefully selected to assist him in the afterlife.

The earliest written reference to black seed is found in the book of Isaiah in the Old Testament. Isaiah contrasts the reaping of black cumin with wheat: For the black cumin is not threshed with a threshing sledge, nor is a cart wheel rolled over the cumin, but the black cumin is beaten out with a stick, and the cumin with a rod. (Isaiah 28:25,27 NKJV). Easton's Bible Dictionary clarifies that the Hebrew word for black cumin, "ketsah," refers to "without doubt the Nigella sativa, a small annual of the order Ranunculaceae which grows wild in the Mediterranean countries, and is cultivated in Egypt and Syria for its seed."

Dioscoreides, a Greek physician of the 1st century, recorded that black seeds were taken to treat headaches, nasal congestion, toothache, and intestinal worms. They were also used, he reported, as a diuretic to promote menstruation and increase milk production.

The Muslim scholar al-Biruni (973-1048), who composed a treatise on the early origins of Indian and Chinese drugs, mentions that the black seed is a kind of grain called alwanak in the Sigzi dialect. Later, this was
confirmed by Suhar Bakht who explained it to be habb-i-Sajzi (viz. Sigzi grains). This reference to black seed as "grains" points to the seed's possible nutritional use during the tenth and eleventh centuries.

In the Greco-Arab/Unani-Tibb system of medicine, which originated from Hippocrates, his contemporary Galen and Ibn Sina, black seed has been regarded as a valuable remedy in hepatic and digestive disorders and has been described as a stimulant in a variety of conditions, ascribed to an imbalance of cold humours.

Ibn Sina (980-1037), most famous for his volumes called "The Canon of Medicine," regarded by many as the most famous book in the history of medicine, East or West, refers to black seed as the seed "that stimulates the body's energy and helps recovery from fatigue or dispiritedness."

Black seed is also included in the list of natural drugs of Al-Tibb al-Nabawi, and, according to the Hadith, "Hold onto the use of the black seed for it has a remedy for every illness except death." This prophetic reference in describing black seed as "having a remedy for all illnesses" may not be so exaggerated as it at first appears. Recent research has provided evidence which indicates that black seed contains an ability to significantly boost the human immune system - if taken over time. The prophetic phrase, "hold onto the use of the seed," also emphasizes consistent usage of the seed.

Black seed has been traditionally and successfully used in the Middle and Far East countries for centuries to treat
Black Seed – The Universal Remedy

ailments including bronchial asthma and bronchitis, rheumatism and related inflammatory diseases, to increase milk production in nursing mothers, to treat digestive disturbances, to support the body's immune system, to promote digestion and elimination, and to fight parasitic infestation. Its oil has been used to treat skin conditions such as eczema and boils and is used topically to treat cold symptoms.

The many uses of black seed has earned for this medicinal herb the Arabic approbation **Habbatul Barakah**, meaning "the seed of blessing."

THE TRUE UNIVERSAL REMEDY

In the United States and in Europe, Black Cumin Oil – Black Seed Oil (Nigella Sativa) is enjoying and unprecedented upsurge in popularity as a food supplement. Black Cumin Oil is also known as "Black Oil, "Black Seed Oil" and "Kulunjii".

Analyses of its contents and the mode of action of Black Cumin Oil were conducted in the U.S. The results give reason to believe that this traditional oil, used for thousands of years, may be a truly universal remedy.

Scientists have confirmed the strong **antibacterial** and **antimycotic** actions of Black Cumin Oil which has been used for centuries in China and indeed throughout the Orient, in remedies for all kinds of inflammatory
conditions and fungal diseases. In their reports, scientists have even highlighted a remarkable decrease in blood sugar levels.

"Black Cumin Oil generally helps stimulate the production of bone marrow and cells of the immune system", wrote the scientists of the Cancer Immune-Biology Laboratory of South Carolina. They also said, "It increases the production of interferon, protects normal cells from the damaging effects of viral disease, destroys tumor cells and increases the number of antibody-producing B-cells. All registered effects make Black Seed Oil an ideal candidate for use in cancer prevention and cure." Not bad for a totally natural product with absolutely no side effects.

Researchers have recently written the worldwide first report on the anti-tumor effects of Black Seed Oil. It's title: "The study of the effects of Nigella Sativa on humans. (Nigella Sativa is the botanical name for Black Cumin.)

The effects of Black Cumin Oil on humans were recently also studied in Germany. A Munich immunologist, Dr. Peter Schleicher, closely co-operated with institutions in the United States and has, as a result, written two books on the subject containing numerous recipes for the treatment of a wide variety of ailments. Most of them are skin disorders or allergy related conditions, like asthma and hay fever and are far too numerous to be listed here.

Historically interesting is that Prophet Muhammad(peace and blessings be upon him)
Black Seed – The Universal Remedy

recommended this oil 1400 years ago as a "remedy against everything except death", and to this day the seed of the Nigella Sativa plant and its oil are a proof to this statement, as more remedies and cures are being discovered.

Black Seed Oil unquestionably has a positive and stabilizing effect on the human immune system, which may be the reason why it is so beneficial in cases of skin disorders and allergy related conditions. Moreover, since most diseases are the result of defective immune systems, it is fair to assume that this oil's beneficial effects go far beyond skin disorders and allergies.

PRIMARY PROPERTIES OF BLACK SEED

As the evidence presented in this section will show, it is quite probable that as medical science increasingly learns more about black seed, one or more of its more active ingredients may become combined into a pharmacy prescription for specific conditions. In the event that this does occur, it is also likely that this particular extract of black seed will be chemically compounded and thus become a more potent medicine.

While it may be argued that chemical additives may increase black seed's effectiveness in treating specific conditions, the healing principles of black seed in its pure, natural form should also be taken into account.
Black Seed – The Universal Remedy

- Black seed, in its complete, natural form, acts on the principle of assisting the body's own natural healing process in overcoming illness or maintaining health. It works on the part or system of the body affected without disturbing its natural balance elsewhere.
- The effect of black seed's combined nutritional and medicinal value is that not only does it help relieve the current condition at hand, but also helps the body build further resistance against future ailments or disease.

While historical evidence suggests black seed's potential use for a wide variety of ailments, we have limited our descriptions of its primary healing properties here to the most recent research findings on black seed.

1. Nutritional value

Black seed is rich in nutritional values.

- Monosaccharides (single molecule sugars) in the form of glucose, rhamnose, xylose, and arabinose are found in the black seed.
- The black seed contains a non-starch polysaccharide component which is a useful source of dietary fiber.
- It is rich in fatty acids, particularly the unsaturated and essential fatty acids (Linoleic and Linoleic acid). Essential fatty acids cannot be manufactured by the body alone, and therefore we acquire these from food.
- Fifteen amino acids make up the protein content of the black seed, including eight of the nine essential amino acids. Essential amino acids
Black Seed – The Universal Remedy

cannot be synthesized within our body in sufficient quantities and are thus required from our diet.
- Black seed contains Arginine which is essential for infant growth.
- Chemical analysis has further revealed that the black seed contains carotene, which is converted by the liver into vitamin A, the vitamin known for its anti-cancer activity.
- The black seed is also a source of calcium, iron, sodium, and potassium. Required only in small amounts by the body, these elements’ main function is to act as essential cofactors in various enzyme functions.

2. Immune system strengthening

Studies begun just over a decade ago suggest that if used on an ongoing basis, black seed can play an important role to enhance human immunity, particularly in immunocompromise patients.

In 1986, Drs. El-Kadi and Kandil conducted a study with human volunteers to test the efficiency of black seed as a natural immune enhancer. The first group of volunteers received black seed capsules (1 gram twice daily) for four weeks and the second group were given a placebo. A complete lymphocyte count carried out in all volunteers before and four weeks after administration of black seed and the placebo revealed that the majority of subjects who took black seed displayed a 72% increase in helper to suppresser T-cells ratio, as well as an increase in natural killer cell functional activity. The control group who
received the placebo experienced a net decline in ratio of 7%. They reported, "These findings may be of great practical significance since a natural immune enhancer like the black seed could play an important role in the treatment of cancer, AIDS, and other disease conditions associated with immune deficiency states."

These results were confirmed by a study published in the Saudi Pharmaceutical Journal in 1993 by Dr. Basîl Ali and his colleagues from the College of Medicine at Kin Faisal University.

In the field of AIDS research specifically, tests carried out by Dr. Haq on human volunteers at the Department of Biological and Medical Research Center in Riyadh, Saudi Arabia (1997) showed that black seed enhanced the ratio between helper T-cells and suppressor T-cells by 55% with a 30% average enhancement of the natural killer (NK) cell activity.

3. Anti-histamine activity

Histamine is a substance released by bodily tissues, sometimes creating allergic reactions and is associated with conditions such as bronchial asthma.

In 1960, scientists Badr-El-Din and Mahfouz found that dimer dithymoquinone isolated from black seed's volatile oil, under the name of "Nigellone," and given by mouth to some patients suffering from bronchial asthma, suppressed the symptoms of the condition in the majority of patients.
Following the results of this early study, crystalline nigellone was administered to children and adults in the treatment of bronchial asthma with effective results and no sign of toxicity. It was observed, however, that although effective, crystalline nigellone displayed a delayed reaction.

In 1993, Nirmal Chakravarty, M.D., conducted a study to see if this delay could be attributed to the possibility of crystalline nigellone being an inhibitory agent on histamine. His hypothesis proved correct. Dr. Chakravarty’s study found that the actual mechanism behind the suppressive effect of crystalline nigellone on histamine is that crystalline nigellone inhibits protein kinase C, a substance known to trigger the release of histamine. In addition, his study showed that crystalline nigellone decreased the uptake of calcium in mast cells, which also inhibits histamine release.

The importance of these results are that people who suffer from bronchial asthma and other allergic diseases may benefit from taking crystalline nigellone.

4. Anti-tumor principles

A study of black seed’s potential anti-tumor principles by the Amala Research Center in Amala Nagar, Kerala (India) in 1991 lent further impetus to Dr. Chakravarty’s suggestion for the possible use of black seed in the treatment of cancer.
Using an active principle of fatty acids derived from black seed, studies with Swiss albino mice showed that this active principle could completely inhibit the development of a common type of cancer cells called Ehrlich ascites carcinoma (EAC). A second common type of cancer cells, Dalton’s lymphoma ascites (DLA) cells were also used.

- Mice which had received the EAC cells and black seed remained normal without any tumor formation, illustrating that the active principle was 100% effective in preventing EAC tumor development.
- Results in mice who received DLA cells and black seed showed that the active principle had inhibited tumor development by 50% less compared to mice not given the active principle.

The study concluded, "It is evident that the active principle isolated from nigella sativa seeds is a potent anti-tumor agent, and the constituent long chain fatty acid may be the main active component."

5. Anti-bacterial

In 1989, a report appeared in the Pakistan Journal of Pharmacy about anti-fungal properties of the volatile oil of black seed. 1992 saw researchers at the Department of Pharmacy, University of Dhaka, Bangladesh, conducting a study in which the antibacterial activity of the volatile oil of black seed was compared with five antibiotics: ampicillin, tetracycline, cotrimoxazole, gentamicin, and nalidixic acid.
The oil proved to be more effective against many strains of bacteria, including those known to be highly resistant to drugs: V. cholera, E. coli (a common infectious agent found in undercooked meats), and all strains of Shigella spp., except Shigella dysentriae. Most strains of Shigella have been shown to rapidly become resistant to commonly used antibiotics and chemotherapeutic agents.

In light of the above research findings, it is of interest that homeopaths have long been known to make a tincture from the black seed for digestive and bowel complaints. Traditionally, the black seed is still used to help relieve vomiting and diarrhea, as well as flatulent colic, and to help counteract the griping action of purgatives (e.g. certain laxatives, fruits such as apricots when over consumed).

6. Anti-inflammatory

- As early as 1960, Professor El-Dakhakny reported that black seed oil has an anti-inflammatory effect and that it could be useful for relieving the effects of arthritis.
- 1995, a group of scientists at the Pharmacology Research Laboratories, Department of Pharmacy, Kings College, Lond, decided to test the effectiveness of the fixed oil of Nigella sativa and its derivative, thymoquinine, as an anti-inflammatory agent. Their study found that the oil inhibited eicosanoid generation and demonstrated anti-oxidant activity in cells.
- The inhibition of eicosanoid generation, however, was higher than could be expected from thymoquinone
Black Seed – The Universal Remedy

alone. Their study suggested that other compounds within the oil might also be responsible for the enhanced anti-inflammatory reactions in cells.

- The scientists speculated that the unusual \textit{C}2\textit{o}:2 unsaturated fatty acids contained in black seed were possibly responsible for boosting the oil's effectiveness.

- In 1997, studies conducted at the Microbiological Unit of the Research Center, College of Pharmacy, King Saud University, Riyadh, Saudi Arabia, found that externally in an ointment form, the anti-inflammatory activity of the black seed was found to be in the same range as that of other similar commercial products. The tests also demonstrated that the black seed is non-allergenic.

7. Promotes lactation

- A study by Agarwhal (1979) showed that black seed oil increases the milk output of breastfeeding mothers.

- A literature search by the University of Potchefstroom (1989), including biological abstracts, revealed that black seed's capacity to increase the milk flow of nursing mothers could be attributed to a combination of lipid portion and hormonal structures found in the black seed.

Research shows that Black Seed Oil contains more than 100 components, some of which are still unidentified, that work together synergistically. It is a rich source of polyunsaturated fatty acids (also
known as "essential fatty acids") which are the building blocks of cells and help the body produce Prostaglandin E1.

Black Seed contains the following Essential Fatty Acids: Myristic Acid (0.5%), Palmitic Acid (13.7%), Palmitoleic Acid (0.1%), Stearic Acid (2.6%), Oleic Acid (23.7%), Linoleic Acid [Omega-6] (57.9%), Linolenic Acid [Omega-3] (0.2%), Arachidic Acid (1.3%) - and the following nutrient components Protein, Thiamin, Riboflavin, Pyridoxine, Niacin, Folacin, Calcium, Iron, Copper, Zinc, Phosphorus.

• Black seed is a valuable source of protein, carbohydrates, essential fatty acids, vitamins A, B1, B2, C and niacin as well as minerals such as calcium, potassium, iron, magnesium, selenium, magnesium and zinc.– Phytochemicals of Nigella sativa seeds. Food Chemistry.

BLACK SEED USES & REMEDIES

Commonly known as the "seed of blessing," black seed (Nigella sativa) has been used as a natural remedy in
Black Seed – The Universal Remedy

the Middle and Far East for more than 2000 years. Black seed provides nutritional support for the body's defense system.

In 1959, the active ingredient in black seed, crystalline Nigellone, was first isolated and identified as providing many health benefits. Clinical trials have validated the efficacy of black seed in promoting health and wellness.

The most pertinent point to be made about black seed is that it should be regarded as part of an overall holistic approach to health and ideally should be incorporated into one's everyday lifestyle. In this way, the many nutritional and healing properties contained in the seed can help build the body's immune system over time, supplying it with the optimum resources it needs to help prevent and fight illness.

USES OF BLACK SEED

1. Black seed as a daily health supplement
Most medicines work best when given a chance to run their full course, and this too, is the case with black seed. In cognizance of its substantial nutritional components, as well as its specific medicinal properties, the body's ability to maintain health and promote healing of a lasting nature is best increased through regular use of black seed.

2. Black seed as an energy source
Ibn Sina (980-1037), in describing the black seed as that
which "stimulates the body's energy and helps recovery from fatigue or dissipatedness," still holds true for Tibb (Islamic Medicine) health practitioners today. The rich nutritional value contained in black seed as outlined by scientific analysis of black seed, also points to it as a great source of energy.

From the Tibb health perspective, the black seed has an ability to maintain and restore body heat. Our Western diet, predominantly made up of cold foods -- ice in our drinks, yogurt, pizza, cheese -- all deplete the innate heat our body requires in order to optimally function. Tibb holds the view that a reduced metabolic rate (innate heat) is the cause of most illnesses. The body, in losing energy, also loses its ability to fight off toxins, resulting in a greater chance of contracting illness.

3. **Black seed and other medication**
Black seed may be used in conjunction with conventional or other forms of natural medicine. It is not recommended that black seed be used exclusively in the treatment of serious medical complaints which may require more immediate action. For example, conditions like bronchitis sometimes require conventional antibiotics to prevent the condition from becoming more severe. However, black seed may be used as a therapeutic aid together with this and other forms of treatment to help counteract any side effects experienced from the use of antibiotics or other potent, chemically based medicines.

4. **Pregnancy and lactation**
The black seed is not recommended during pregnancy,
however during lactation. It is an excellent form of added nutrition for both mother and the growing child while its immune system boosting properties serve as a natural, safe way to build resistance against illness. In addition, as studies have shown, black seed helps increase milk production during breastfeeding.

Initial trials have shown that black seed may have an ability to increase the male sperm count.

5. Babies and toddlers
In addition to its many nutritional components, black seed contains carotene, which is essential for infant growth. During the toddler years, black seed provides children with all the energy they require for this active stage of life. Regular usage of black seed, which increases its immune system strengthening effect on the body, will decrease the length and severity of natural childhood illnesses, particularly during winter when children are most susceptible to contracting colds and flu.

6. Black seed for the elderly person

Which its rich nutritional, energy-giving value, in combination with immune system strengthening properties, black seed is an ideal health supplement for the elderly person.
MORE USES OF BLACK SEED

Ibn Sina (Avicenna) in Qanun (Canon of Medicine) says "Black Seed Acts as an Expectorant, it stimulates the body's energy and helps recovery from fatigue and dispiritedness."

Ibn Qayyim Al Jawziyya in "Medicines of The Prophet" lists up to 50 illnesses cured by the Black Seed.

These include:- benefits bronchitis and cough, helps increase body tone, digestive tonic, quells belching, dries up damp stomach, quells colic pain - stomach gas cholic, expels worms from intestinal tract, removes patches of leukoderma, benefits some skin allergies such as Acne & Eczema, opens obstruction, stimulates menstrual period, increase flow of breast milk, quells quarta phlegmonous fever and can cause excessive salivation.

He also says that its oil retains the nervous system, helps pertussis, dry cough, asthma, and bronchial respiratory complaints.

Taking the oil unmixed internally can cause gripe and greatly irritates the digestive system.

He also states that it helps abnormal absence of menstruation (Amenorrhoea) and menstrual difficulties (dysmenorrhoea), kills intestinal worms and can promote abortion in very high doses, (doses in excess of 20g Black Seed) it helps tertian fever, paralysis, and piles among other illnesses.
Black Seed – The Universal Remedy

- **Stomach worms**: Removes the stomach worms and intestinal worms.
- **Colds**: If boiled and applied to the head, it cures cold and rheumatic tendency.
- **Moles**: It can be applied to remove the developed moles from the body, cleans the skin and regularizes the menses.

**REMEDIES FOR MEDICAL CONDITIONS**

1. **Cough / Asthma:** Rub the chest and back with black seed diluted in olive oil (1:5). Inhale the vapour of the oil. One may also take 1/4 teaspoon of black seed oil placed under tongue.

2. **Diarrhea:** Mix a tablespoon of black seed oil with a cup of yogurt. Drink mixture twice a day for 3 days.

3. **Headaches / Head Colds:**

   **Remedy 1:** Mix
   
   - 1 tbsp. ground black seed
   - 1 tbsp. ground anise seed
   - 1 tbsp. powdered cloves

   Take one teaspoon of this mixture before meals. Keep mixture in mouth until it can be swallowed. Do not take with water.

   **Remedy 2:** Take 1/2 teaspoon of black seed oil 2-3 times daily.
Black Seed – The Universal Remedy

4. **Muscular Pain / Rheumatism:** Mildly heat a small amount of black seed mixed with olive oil and then stroke the painful area intensely with preparation.

5. **Skin Conditions:**

   **Recipe 1:** *Internally*: Take 1/2 teaspoons blackseed oil 2-3 times a day.

   **Recipe 2:** For a clear complexion, mix 1/2 teaspoon of black seed oil with a tablespoon of olive oil. Rub the face with this mixture and leave on for one hour. Wash with soap and water.

6. **Dizziness and ear infection:** Use it as a drop for the ears for “infection”; and drink it in tea and rub under your cheek and at the back of your neck for dizziness.

7. **For women and delivery:** It is the best thing for helping with the pains of labor. Boil the black seed with honey and drink.
8. **For skin diseases:** Mix a unit of the black seed oil with a same unit of rose water and 2 units of brown flour. Before you use the mix rub the area with a cloth dipped in vinegar. Lightly apply the mixture to the skin and then expose to the sun every day.

9. **Rheumatism:** Warm black seed oil and massage the oil into the painful areas. Also, make a drink of boiled black seed and mix with honey, drink before going to sleep; and have a lot of yaqeen (full-faith).

10. **High blood pressure:** Mix the black seed with hot liquids you may drink, such as coffee, tea, etc; and rub your body with the oil and have yaqeen.

11. **Chest pains and colds:** Add 1 tablespoon of the black seeds in boiling water and inhale the vapor and cover your head before you sleep.

12. **Heart burn:** Add a few drops of black seed oil to a hot cup of milk and add one teaspoon of honey. Also, eat a lot of lettuce.
13. **Eye pain:** Rub the oil around the eyes before you sleep and mix a few drops of the oil with hot drinks.

14. **Ulcers:** Mix 10 drops of black seed oil with a cup of honey. Eat 1 spoon of this mixture daily, every morning, before you eat or drink anything else. Follow with a glass of milk. Do this for two months.

15. **Cancer:** Rub the affected area with black seed oil. 3 times a day drink a mixture of a teaspoon of the oil with a glass of carrot juice. Do this for three months.

16. **Laziness:** Mix 10 drops of black seed oil with a glass of orange juice when waking up for 10 days. Important, do not sleep after Fajr salat.

17. **For memorizing:** Boil mint and mix it with honey and 7 drops of black seed oil—drink while warm any time of the day. Also, stop drinking coffee and tea.
Black Seed – The Universal Remedy

18. **Diabetes:** Mix

- 1 cup of black seeds
- 1 cup of watercress seeds
- 1/2 cup of pomegranate peel

Grind the mixture into a powder. Take half a spoonful of the mixture together with a teaspoon of black seed oil before breakfast for one month.

19. **Ear ache:** Soak 1 fresh clove of garlic in 1 oz. of black seed oil for 3 days. Drop a few drops of oil directly into the ear and massage some oil behind the ear.

20. **Eye Soreness:**

**Remedy 1:** *Externally-* As eye compress for soreness caused by over-exertion.

Boil 1 tablespoon of black seed in 8 oz. water.  
Allow to sit for 10 minutes.  
Pour through strainer.  
Soak two cotton pads in the solution.  
Place pads on eyes for 10 minutes.
21. Flatulence:

**Remedy 1:** Internally- Make a tea

Mix equal parts Ground black seed, ground fennel and peppermint.  
Add 3-7 drops of Black seed oil.  
Sweeten with honey.

**Remedy 2:** Externally- Make a compression

Apply a compression soaked with apple vinegar and black seed to the stomach.

22. Hypertension: Strain a teaspoon of finely crushed black seeds into a hot drink and take with two lobes of garlic every morning before breakfast.

23. Insomnia: A teaspoon of black seed and honey or with tea before supper offers relief from insomnia and a restful sleep.
Black Seed – The Universal Remedy

24. Nausea / Vomiting: Mix a teaspoon of ground black seed in boiled mint three times daily.

25. Toothaches:

Remedy 1: Mix ground black seed with olive oil to form a paste and paint the tooth with it.

Remedy 2: Boil 8 oz apple cider vinegar with 2 tablespoons ground black seeds. Strain. Rinse the mouth with it for several days.

Remedy 3: Rub painful area with 1-2 drops of the oil.

RECOMMENDATION

In view of the numerous benefits of Black seeds, as well as it being a Sunnah of Rasullullah(sallallahu alaiyhi wassallam), it would be recommended that , A teaspoon of Black Seed Oil or the seeds be taken daily as a dietary supplement. The oil does not taste nice, but it can be mixed into a glass of orange juice or into yoghurt to camouflage it's taste. It can also be used for external application. It’s meritorious benefits far outweighs , what has been mentioned in these pages. Ongoing research continues to highlight more remedies, uses and benefits. Therefore, it would be in the interest of the health seeker
to include the Sunnah of Black Seeds in the daily diet to benefit wholesomely.

FREQUENTLY ASKED QUESTIONS:

What is black seed?
Black seed is a herbal product. It is a traditional herb that has been in use for thousands of years by people living in the Middle East and some parts of Asia and Africa to promote health and fight disease. It is also known as the “Blessed Seed”.

What are some of the traditional uses of Black seed?
Traditionally, Black seed has been used for a variety of conditions and treatments related to respiratory health, stomach and intestinal complaints, kidney & liver function, circulatory and immune system support, and to improve general health. It can be topically used for eczema, psoriasis, arthritis, inflammation, and scalp massage.

What are some of the other Effects of Black Seed?
Black Seed helps support metabolism, digestion, and lowers blood sugars levels. It has been useful in the treatment of diabetes mellitus. In digestive matters, Black Seed helps to stimulate bile and promote regularity, improve digestion, and has been used to fight worms and parasites of the intestinal tract.
Does Black Seed have information to support its use?
Yes, the benefits of Black Seed have been documented in historical records dating back to the year 1400 AD, more recently, over 150 research papers have been undertaken worldwide.

What will Black Seed do for people and who should take it?
Black Seed capsules are recommended to the people who ask for a product which will help them to remain healthy during periods when they feel that their body defences are weakening. Also for those who are looking for a product that will augment their healthy lifestyle.

What are the overall benefits of Black Seed?
Black Seed is a excellent herb with many benefits, especially when it comes to maintaining a strong and healthy immune system. It is also very useful to individuals suffering from asthma and respiratory complaints, weakened or over-stimulated Immune system, kidney or liver problems, digestive and stomach problems, arthritis and circulatory complaints, allergies and hay fever, and acne. Black Seed is a safe and excellent herb that can be used by anyone. It has no known side effects and has a long history of use for several thousand years.

Are the benefits immediate?
No, the subtle benefits will be seen after a period of time.
Is Black Seed a medicine?
No, Black Seed is a herb, and should be taken daily on a continual basis.

What is more effective, Black Seed herb or oil?
Both are effective in their own standards. However, Black Seed oil is more concentrated than the herb itself, but many people prefer using the herb to the oil. Caution should be taken when using Black Seed oil due to the fact that many oil products are imported and may be adulterated or mixed with other oils. Some oils coming from the Middle East are extracted with heat and hexane, a petroleum by-product. Always use a product that is labeled as 100%, cold-pressed, solvent free, and packed and sealed by machine.

What does Black Seed contain?
Black seed herb contains over 100 components, many of which still remain to be discovered. The Black Seed constituents that have been identified include: -Fixed oils Saponins, Volatile and essential oils, Alkaloids, Amino Acids (All essentials are present). It also has traces of calcium, iron, sodium, potassium and crude fibre.

Can I use it with other medication and does it have any side effects? 
Black Seed Oil may be used in conjunction with conventional or other forms of natural medicine. It is not recommended that Black Seed Oil be used exclusively in the treatment of serious medical complaints which may require more immediate action. However, Black Seed Oil may be used as an aid together with other conventional
forms of treatment. When used as directed it remains one of the safest and longest used herbs in human history. However it is not recommended during pregnancy.

*I suffer from cold and flu symptoms at least three times a year for sometimes two weeks at a time, will Black Seed help me?* You have a compromised immune system. Black Seed has proven to be an excellent immune booster because it has a complex array of active substances e.g. nine of the Amino Acids not produced by the body, macro and microelements. This symphony of active ingredients makes the Black Seed an excellent immune supplement. Regular use of the Black Seed would definitely remedy the problem. Take one capsule of Black Seed 450mg daily.

*Can Black Seed be used for Asthma?* Black Seed oil inhibits eicosanoid generation in leukocytes and this has a positive reaction to the treatment of asthma.

*How is the Black Seed brand of Black Cumin Oil made?* The primary measure of the oils potency and nutritional value is its purity. This in turn is determined by the quality of the raw Black Cumin Seeds and especially the actual extraction process of the pure oil. The original "Black Seed" brand of Black Cumin (Nigella sativa) seed oil is internationally renowned and established in over 15 countries worldwide. The extraction process starts with the selection of Black Cumin seeds which are then sorted and cleaned. Thereafter, the oil is extracted using the cold pressing
Black Seed – The Universal Remedy

method- a mechanical process using no chemical additives or heat- thus ensuring the retention of the oil's inherent nutrients and natural purity. The original "Black Seed" brand of Black Cumin (Nigella sativa) seed oil is a valuable source of protein, carbohydrates, essential fatty acids, vitamins A, B1, B2, C and niacin as well as minerals such as calcium, potassium, iron, magnesium, selenium and zinc.

CHEMICAL COMPOSITION:

Amazingly Black Seed's chemical composition is very rich and diverse. Aside from its primary ingredient, crystalline nigellone, Black Seed contains 15 amino acids, proteins, carbohydrates, both fixed oils (84% fatty acids, including linolenic, and oleic), and volatile oils, alkaloids, saponin, and crude fiber, as well as minerals such as calcium, iron, sodium and potassium.

The Black Seed contains the following Essential Fatty Acids: Myristic Acid (0.5%), Palmitic Acid (13.7%), Palmitoleic Acid (o.1%), Stearic Acid (2.6%), Oleic Acid (23.7%), Linoleic Acid [Omega-6] (57.9%), Linolenic Acid [Omega-3] (0.2%), Arachidic Acid (1.3%) - and the following nutrient components Protein, Thiamin, Riboflavin, Pyridoxine, Niacin, Folacin, Calcium, Iron, Copper, Zinc, Phosphorus.

There are still many components in Black Seed that haven't been identified. But research is going on around the world.

### FIXED OIL (37.2%)

- **Triglycerides**
  - Saturated Fatty Acids
  - Myristic
  - Palmitic
  - Stearic
  - Unsaturated Fatty Acids
  - Eicosadienoic
  - Oleic
  - Linoleic
  - Linolenic

  - Helps inflammation - associated with Arthritis

  - Insecticidal Activity
    a) Precursors to Prostaglandins which among other things increase CARDIAC output & RENAL (kidney) output (Lower blood pressure)
    b) Action on smooth muscle, i.e. Gastrointestinal Tract and Reproductive system.
    c) Action on Central Nervous system and metabolism (food breakdown)
    d) Preparations containing the two used in the treatment of (i) Arthritis, (ii) Lower Blood Cholesterol, (iii) Pre Menstrual Tension (iv) Sclerosis.

### VOLATILE AND ESSENTIAL OILS (1.4%)

- **Sterols**
  - 23 Different Sterol Structures identified

  - Many Exert Bioactivities related to cortrosteroids or the sex hormones
  - Increases Milk Flow
  - Enhance Immunity

  - Antimicrobial Activity
    - Active against the following micro-organisms (bacteria, fungi) E. Coli, Salmonella paratyphi, Staphylococcus aureas, Aspergillus Flavours, Fusarium tenim.
